TIMELY APP

Feature1: ALARM		
Conditions	**Stories**	**Assertions**
The user can set alarms	As a user I can specify different times for the phone to alert me	After setting the alarm, the app will automatically generate sounds at the exact specified time
The user can choose different sounds	As a user I can select the sound or ringtone that I desire	The user can select the desired sound or ringtone for each specific alarm item
The user can select the day or days for the alarm to activate	As a user I can specify the exact day or days for the alarm to sound	After specifying the days on the alarm profile, the alarm will sound based on the user criteria
The user can disable alarm with a puzzle challenge	As a user I can deactivate the alarm through a puzzle challenge	To deactivate the alarm without the snooze ability, a series of puzzles are presented to the user to solve before the sound is cut off
The user can edit the alarm	As a user I can edit the time of the alarm on the fly	When the user edits the alarm profile, the phone will only react based on the scheduled selection
The user can delete an alarm	As a user I can manually delete any profile	The user can delete the profile of an alarm to permanently disable the sounds associated with it

FEATURE 2: TIMER		
The user can enable the timer	As a user I can use a timer for any length of time	The timer will display time decrementing on screen once activated
The user can add +15 second increments to the timer	As a user I can add 15 seconds to a timer if I so desire	When the user clicks this button, 15 extra seconds will be added to the timer
The user can reset the timer	As a user I can reset the timer manually	The reset button will stop running current activity and return to zero

The user can pause the timer	As a user I can temporarily pause the timer	The pause button will temporarily cause the timer to freeze on screen
The user can change themes on the timer	As a user I can choose a theme that I like on the alarm profile	When the user enters the alarm profile, the theme button will open a screen for additional screen patterns and colors to be selected for selected alarm
The user can change sounds on a timer	As a user I can select a sound that I like	User can apply different sound themes for selected alarm profile

FEATURE 3: SYNC ALARM		
The user can select an alarm for a different device	As a user I can set the alarm and have it sync across multiple devices	When the desired alarm is selected, a list of available devices would be present for the user to choose and have an alarm to also activate on that specified device
The user can turn off Sync feature	As a user I can manually turn off the sync to have only one device activate the sound profile	With sync turned off, other devices connected with the cloud will continue to ring
The user can specify the day for Sync to be activated	As a user I have the option to have the alarm turn on for the days I schedule it for	Alarm will sound off of the day or days selected
The user can select the vibrate function	As a user I can enable vibrations for individual alarms	The alarm profile will vibrate in addition to sounding off
The user can sync remote alarm	As a user I can make changes to any alarm	The edited alarm will update on the existing profile and will sync across all devices connected to the internet
The user can set a different sound to go with the remote alarm	As a user I can customize the sounds for a selected alarm	The profile will have a list of different sounds for the user to select
